Exercise 13 - Compare discretizations of a Neumann condition

When running the program `Neumann_discr.py`, go to the bottom line in the script and uncomment the task you wish to get the results from.

Example:

```
if __name__ == '__main__':  
    #main_a()  
    main_b  
    #main_c()  
    #main_d()
```

a)

When running `main_a` you'll get this result from the terminal:
